

Custom Stripmaster® Wire Strippers

The **Custom Stripmaster® Wire Stripper** has set the industry standard in hand-held, precision wire strippers for fast, accurate wire stripping with its one-step, squeeze-action stripping and unique precision blade design.

This light-weight stripper, made from sturdy die-cast zinc, is designed for maximum mobility and high productivity in all types of commercial and precision stripping applications.

The Custom Stripmaster® Wire Stripper offers extra leverage with its spring-action mechanical design for reduced operator effort. It can be customized with your choice of gripper pads and blade sets to match your stripping requirements. Optional short-stop latch and transparent wire stop increases tool versatility and insures consistent strip lengths.

Gripper pads hold the wire securely in a centerline relationship with the blade.

Die-type blades incorporate a counterbored hole sized to the insulation and an inner cutting hole sized to the conductor. This varies depending on insulation type and thickness.

Features and Benefits

- **Precision counter-bored die-type blades** meet Military Stripping Specifications. An outer counter-bore hole, sized to the insulation while the inner-hole cuts the insulation, but doesn't contact the conductor during stripping.
- **Strip from 10 to 30 AWG** solid and stranded wire with matched, precision blades that meet Military Specifications and assure nick-free wire stripping time after time.
- **One-step stripping action** grips, cuts and removes the wire insulation with one squeeze. Our unique spring-action design provides a mechanical advantage to reduce the effort required for each strip, and returns the tool to its original setting, ready for the next strip.
